***DETAILED ACTION***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 02/05/09 has been entered.

Applicant cancels claims 4, 15.

**Accordingly, claims 1-3, 5-8, 16-18 are examined in the instant application.**

***Claim Rejections - 35 USC § 112, First Paragraph, Enablement***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3, 5-8, 16-18 remain rejected under 35 U.S.C. 112, first paragraph, for lack of enablement for a method for detecting hepatic cancer, for reasons already of record on paper of 09/30/08.

The response asserts as follows:

The claim is enabled because a person of ordinary skill in the art would be able to measure the GPC3 in the sample, and determine whether that level was "greater than the normal levels" from a corresponding sample type, and thereby be enabled to "detect" hepatic cancer.

There is no requirement that the skilled artisan use ONLY the claimed method as a final determination before treatment. Therefore, the "practical issue" raised in the Office Action regarding treating a cirrhotic person using a cancer treatment is completely inapposite. The claimed method, notably, does not include a treatment step. The issue is whether a skilled artisan can practice the invention as claimed. Clearly, as disclosed in the subject application, one of ordinary skill can determine whether a test sample (blood, serum, or plasma) contains "greater levels" of GPC3 than the levels of GPC3 found in a normal control, and thereby detect hepatic cancer.

The response has been considered but is not found to be persuasive for the following reasons:

The issue is not whether one can detect the level of soluble GPC3 in blood, serum or plasma in a test sample. The claims method would be non-specific and would also detect liver cirrhosis, in view of the teaching of Hippo et al, of record, that soluble GPC3 level is also increased in serum of patients having liver cirrhosis. It is noted that the test sample in the claimed method could be from any patients, and not necessarily patients suspected of having hepatic cancer. Further, it is not clear what constitutes "normal" blood, serum or plasma, which is not necessarily blood, serum or plasma from non-cancerous control subject.

***New Rejection Due to the Amendment***

***Claim Rejections - 35 USC § 112, Second Paragraph***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3, 5-8, 16-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

1. Claims 1-3, 5-8, 16, 18 are indefinite, because it is not clear in claim 1 how normal blood, serum, or plasma “corresponds” to the test sample.
2. Claim 17 is indefinite, because it depends on cancelled claim 4. For the purpose of compact prosecution, claim 17 is interpreted as depending on claim 1.
